

In 2021, Africa accounted for 95% of all malaria cases and 96% of deaths. Together with our partners, we are working to improve rural access to vital health services and commodities, using community-led solutions.

**THANK YOU.**

MAM@Scale has continued to build on the success of its pilot, transitioning to full government ownership in Zambia, and increasing access to effective treatment for severe malaria

Recording an **87%** reduction in child mortality from severe malaria

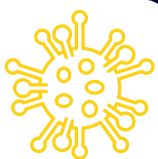

**NEARLY 1,000,000** people reached

Published in the World Health Organisation's Bulletin

COVID-19 rapid antigen test screening project continued at three sites in Uganda, targeting truck drivers & their assistants

**Busia**

**Malaba**

**Namanve**

Research into the role of the transport sector in facilitating and preventing trafficking in persons along transport corridors in Uganda & Tanzania continued

Developed **sensitisation materials & integrated road safety messaging**

**2,643 tests conducted**

**8,140 truck drivers and assistants sensitised**

### Sustainable development goal 3.3: End the epidemic of malaria by 2030

Nothing should prevent communities from accessing vital healthcare.

By sharing knowledge with our partners, we are working to ensure that every person in sub-Saharan Africa has the opportunity to build the skills they need to transform their future.
